It is understandable that different people have different preference in terms of 4A0-C02 study guide.

NEW QUESTION: 1

Referring to the exhibit, which firewall filter action(s) will be applied to incoming frames to ge-1/0/3?

- A. Frames will be counted initially by filterA and then counted by filterB.
- B. Frames will be counted by filterB only.
- C. Frames will be counted initially by filterB and then counted by filterA.
- D. Frames will be counted by filterA only.

Answer: A

NEW QUESTION: 2

Select and Place:

Answer:

Explanation:

NEW QUESTION: 3

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016.

You install IP Address Management (IPAM) on Server1.

You need to manually start discovery of servers that IPAM can manage in contoso.com.

Which three cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Step 1: Invoke-IPAMServerProvisioning

Choose a provisioning method

The Invoke-IPAMGPOProvisioning cmdlet creates and links three group policies specified in the Domain parameter for provisioningrequired access settings on the server roles managed by the computer running the IP Address Management (IPAM) server.

Step 2: Add-IPAMDiscoveryDomain

Configure the scope of discovery

The Add-IPAMDiscoveryDomain cmdlet adds an Active Directory discovery domain for an IP Address Management (IPAM) server. A discovery domain is a domain that IPAM searches to find infrastructure servers. An IPAM server uses the list of discovery domains to determine what type of servers to add. By default, IPAM discovers all domain controllers, Dynamic Host Configuration Protocol (DHCP) servers, and Domain Name System (DNS) servers.

Step 3: Start-ScheduledTask

Start server discovery

To begin discovering servers on the network, click Start server discovery to launch the IPAM ServerDiscovery task or use the Start-ScheduledTask command.

NEW QUESTION: 4

A. Option C

B. Option B

C. Option A

D. Option D

Answer: B

Explanation:

Notice the line, which says "Interface VLAN1, changed state to administratively down". This shows that VLAN1 is shut down.

Hence remote management of this switch is not possible unless

VLAN1 is brought back up. Since VLAN1 is the only interface shown in the output, you have to assume that no other VLAN interface has been configured with an IP Address.
