Answer: C

NEW QUESTION: 2

Hinweis: Diese Frage ist Teil einer Reihe von Fragen, die dasselbe Szenario verwenden. Zur Vereinfachung wird das Szenario in jeder Frage wiederholt. Jede Frage hat ein anderes Ziel und eine andere Antwortmöglichkeit, aber der Text des Szenarios ist in jeder Frage dieser Reihe genau gleich. Sie verwalten eine Microsoft SQL Server-Instanz, die die folgenden Datenbanken SalesDb1, SalesDb2 und SalesDb3 enthält. Jede Datenbank hat den Namen Produkte und Verkäufe eingereicht. Die folgende Tabelle zeigt die Konfiguration jeder Datenbank.

Die Sicherungsstrategien für jede Datenbank werden in der folgenden Tabelle beschrieben.

Jeder vollständige oder differenzielle Sicherungsvorgang schreibt in eine neue Datei und verwendet eine andere Sequenznummer. Sie stellen die folgenden Probleme mit der Beschädigung der Datenbank fest.

SalesDb3 meldet eine Reihe von Datenbankbeschädigungsproblemen im Zusammenhang mit den Fehlern 823 und 824 beim Lesen von Datenseiten.

Sie müssen die folgenden Informationen zu den beschädigten Seiten anzeigen:

- * Name der Datenbank
- * betroffene Datei-ID
- * Der physische Name der betroffenen Datei
- * betroffene Seiten-ID
- * Ereignistyp, der den Fehlertyp identifiziert
- * Fehleranzahl

Benutzer melden Leistungsprobleme, wenn sie Abfragen für SalesDb2 ausführen. Sie planen, Abfragestatistiken und Ausführungspläne für SalesDb2 mithilfe des Abfragespeichers zu überwachen. Die Überwachungsstrategie muss die folgenden Anforderungen erfüllen:

* Führen Sie eine automatische Datenbereinigung durch, wenn die Festplattennutzung des Abfragespeichers 500 Megabyte (MB) erreicht.

* Erfassen Sie Abfragen basierend auf dem Ressourcenverbrauch.

* Verwenden Sie einen veralteten Abfrageschwellenwert von 60 Tagen.

Das Abfrageoptimierungsprogramm generiert suboptimale Ausführungspläne für eine Reihe von Abfragen in der Sales-Tabelle in SalesDb2. Sie erstellen einen Wartungsplan, der die Statistiken für die Tabelle aktualisiert. Der Plan sollte nur Statistiken aktualisieren, die automatisch erstellt wurden und 30 Tage lang nicht aktualisiert wurden. Das Update sollte auf allen Daten in der Tabelle basieren.

Sowohl bei SalesDb1 als auch bei SalesDb2 treten Blockierungs- und Deadlock-Probleme auf. Sie erstellen eine erweiterte Ereignissitzung, um die Datenbanken zu überwachen. (Klicken Sie auf die Schaltfläche "Ausstellen".) Sie müssen die Sitzung "Erweiterte Ereignisse" erstellen und konfigurieren. Verwenden Sie die Dropdown-Menüs, um die Antwortauswahl auszuwählen, die jede Anweisung basierend auf den in der Grafik dargestellten Informationen vervollständigt.

Answer:

Explanation:

Explanation

Lock escalation is the process of converting many fine-grain locks into fewer coarse-grain locks, reducing system overhead while increasing the probability of concurrency contention.

NEW QUESTION: 3

John Adams is an HR partner in the ACME organization. ACME IT wants to limit access to HR servers to designated IP addresses to minimize malware infection and unauthorized access risks.

Thus, the gateway policy permits access only from John's desktop which is assigned a static IP address 10.0.0.19.

John received a laptop and wants to access the HR Web Server from anywhere in the organization. The IT department gave the laptop a static IP address, but that limits him to operating it only from his desk.

The current Rule Base contains a rule that lets John Adams access the HR Web Server from his laptop with a static IP (10.0.0.19). He wants to move around the organization and continue to have access to the HR Web Server.

To make this scenario work, the IT administrator:

- 1) Enables Identity Awareness on a gateway, selects AD Query as one of the Identity Sources installs the policy.
- 2) Adds an access role object to the Firewall Rule Base that lets John Adams PC access the HR Web Server from any machine and from any location.

What should John do when he cannot access the web server from a different personal computer?

- A. The access should be changed to authenticate the user instead of the PC
- B. Investigate this as a network connectivity issue
- C. John should lock and unlock his computer
- D. John should install the Identity Awareness Agent

Answer: A

NEW QUESTION: 4

Scenario

- A. 0
- B. 1
- C. 2c
- D. 2

Answer: D
