NEW QUESTION: 1

The Dynamic Frequency and Channel Allocation feature in GSM provides which main benefit(s)?

- A. DFCA can double base station site traffic handling capacity.
- B. DFCA minimizes the overall network interference.
- C. All are valid.
- D. DFCA removes the need for frequency planning for non-BCCH TRXs.

Answer: C

NEW QUESTION: 2

Which of the following is a benefit of using BitLocker to encrypt a drive?

A. It prevents unauthorized users from accessing the data on the drive.

B. It prevents unauthorized users from accessing the data on the drive, even if they have physical access to the drive.

C. It prevents unauthorized users from accessing the data on the drive, even if they have physical access to the drive, and it also prevents unauthorized users from accessing the data on the drive, even if they have physical access to the drive.

D. It prevents unauthorized users from accessing the data on the drive, even if they have physical access to the drive, and it also prevents unauthorized users from accessing the data on the drive, even if they have physical access to the drive.

Answer: C

Explanation: BitLocker is a full-disk encryption software developed by Microsoft. It is designed to protect data on hard drives, SSDs, and USB drives. BitLocker encrypts the data on the drive, making it unreadable to anyone who tries to access the data without the proper key. This helps to prevent data theft and unauthorized access to sensitive information.

NEW QUESTION: 3

You need to insert code at line LE03 of LoginEvent.cs to ensure that all authentication events are processed correctly. How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: id
id is a unique identifier for the event.

Box 2: eventType
eventType is one of the registered event types for this event source.

Box 3: dataVersion
dataVersion is the schema version of the data object. The publisher defines the schema version.

Scenario: Authentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.

The following example shows the properties that are used by all event publishers:

```
[
{
"topic": string,
"subject": string,
"id": string,
"eventType": string,
"eventTime": string,
"data": {
object-unique-to-each-publisher
},
"dataVersion": string,
"metadataVersion": string
}
```

]
