Explanation:

In the diagram, DeepSouth is connected to Dubai's S1/2 interface and is configured as follows:

```
Interface Serial1/2
```

```
IP address 192.168.0.5 255.255.255.252
```

```
Encapsulalation PPP ; Encapsulation for this interface is PPP
```

`technologies_configuration_example09186a0080094333.shtml#configuringusernameifferentfromtheroutersname` Here is a snipit of an example:

If Router 1 initiates a call to Router 2, Router 2 would challenge Router 1, but Router 1 would not challenge Router 2. This occurs because the `ppp authentication chap callin` command is configured on Router 1. This is an example of a unidirectional authentication. In this setup, the `ppp chap hostname alias-r1` command is configured on Router 1. Router 1 uses "alias-r1" as its hostname for CHAP authentication instead of "r1." The Router 2 dialer map name should match Router 1's `ppp chap hostname`; otherwise, two B channels are established, one for each direction.
