#### **NEW QUESTION: 1**

Scenario

Additional Information

Further information on some resources who could be involved in the project:

Outcome Account Manager: He represents Outcome which is a recruitment agency that provides specialist outsourcing resources. Outcome provided the consultants who carried out the feasibility study and the same consultants will be providing support and guidance to the Information Technology and Facilities teams during the project.

Director of Finance Division: She was transferred from the Information Technology Division 12 months ago. She is responsible for ensuring a cost-conscious approach is adopted in all operational and project activities across the Ministry of Food Hygiene.

Hardware Manager: Reports to the Director of Information Technology. He provides computer hardware to all business functions but has little awareness of the needs of his colleagues working in software.

Payroll Manager: Reports to the Director of Finance. He is a very experienced and efficient qualified accountant who has much of the responsibility of running the Finance Division on behalf of the Director of Finance. He has been involved in drafting the Ministry's business strategy and assisting in a full business risk assessment. He also drafted the corporate Business Case standards.

Which 2 alternative actions apply to the proposed user assurance for this project?

- A. Retain because they are able to help identify stakeholders and their communication requirements.
- B. Retain because they are both very positive about outsourcing the selected business functions.
- C. Retain because selecting only one of them may cause unnecessary conflict.
- D. Retain because their divisions will be the major users of the outsourced services and they can provide the user perspective on the impact of any proposed changes.
- E. Remove because neither of these individuals are from the business functions to be outsourced.

**Answer: A,D**

**Answer: B**

**NEW QUESTION: 4**

You have an Azure Cosmos DB database that uses the SQL API. The database will store telemetry data from the IoT devices of a company that has 50,000 customers. Temperature data will be collected from each IoT device. Each customer owns an average of 100 IoT devices. Each device transmits data every five minutes.

The following is a sample of the data that will be inserted into the database.

The customers will be able to monitor their devices data from an online application.

The customers will be able to purchase different levels of service as shown in the following table.

The throughput rate will be managed in Cosmas DB and not by the client application.

You need to define a partitioning strategy for the data. The strategy must provide the most efficient use of throughput. Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection Is

- A. Create a single collection for all the customers.
- B. Set the partition key to customerid.
- C. Set the partition key to deviceid.
- D. Create a collection for each customer.

**Answer: A,B**
