NEW QUESTION: 1

Your company has a Microsoft 365 E3 subscription. All devices run Windows 10 Pro and are joined to Microsoft Azure Active Directory (Azure AD). You need to change the edition of Windows 10 to Enterprise the next time users sign in to their computer. The solution must minimize downtime for the users.

What should you use?

- A. Windows Update
- B. Windows Autopilot
- C. Subscription Activation
- D. an in-place upgrade

Answer: B

Explanation:

When initially deploying new Windows devices, Windows Autopilot leverages the OEM-optimized version of Windows 10 that is preinstalled on the device, saving organizations the effort of having to maintain custom images and drivers for every model of device being used. Instead of re-imaging the device, your existing Windows 10 installation can be transformed into a "business-ready" state, applying settings and policies, installing apps, and even changing the edition of Windows 10 being used (e.g. from Windows 10 Pro to Windows 10 Enterprise) to support advanced features.

A failure to record depreciation must be corrected because the effects of the error do not automatically reverse in future periods. Expenses are understated in the year of the error, but no corresponding overstatement of expenses occurs in later years. An audit of an entity has revealed the following four errors that have occurred but have not been corrected:

1. Inventory at December 31. Year 3: US \$40,000, understated
2. Inventory at December 31. Year 4: US \$15,000, overstated
3. Depreciation for Year 3: US \$7,000, understated
4. Accrued expenses at December 31. Year 4: US \$10,000, understated
