- A. monitor activity on wireless and wired LANs
- B. use SSIDs to distinguish between wireless clients.
- C. send LWAPP packets to access points.
- D. register with a single access point that controls traffic between wired and wireless endpoints.

Answer: C

Explanation:

Explanation

Lightweight APs (LAPs) is devices require no initial configuration. LAPs use the Lightweight Access Point Protocol (LWAPP) to communicate with a WLAN controller (WLC), as shown in the below figure.

Controller-based APs are useful in situations where many APs are required in the network. As more APs are added, each AP is automatically configured and managed by the WLC.
