Topic 4, Litware Inc
Overview
Litware, Inc. is a manufacturing company. Litware has a large
data center and several offices.
Existing Environment
Network Infrastructure The network contains a third-party
network management device that supports SNMPv3. The network
contains network devices that support ICMP and SNMP and other
devices that support SNMP only. A group named Network
Technicians contains the user accounts for the support
technicians who manage all of the network servers. The support

technicians regularly install updates on the network servers.
System Center 2012 Infrastructure
Litware has all of the System Center 2012 components installed
in the data centers. Service Manager is integrated with
Configuration Manager and Operations Manager. The System Center
2012 Monitoring Pack for UNIX and Linux Operating Systems is
installed on the
Operations Manager servers.
Software updates are deployed by using Windows Server Update
Services (WSUS) and Configuration Manager.
Virtualization Infrastructure
Litware has 30 Hyper-V hosts that run Windows Server 2008 R2.
The Hyper-V hosts are the members of failover clusters. Each
office contains two virtual machines that run Microsoft SQL
Server 2008 R2. The virtual machines are
configured in a failover cluster.
You have 100 virtual machines that run the following operating
systems:
-Windows Server 2012
-Windows Server 2008 R2
-Windows Server 2003 R2
-Red Hat Enterprise Linux 6
-SUSE Linux Enterprise Server 11 Application Infrastructure
Litware has a distributed application named App1 that is
installed on several virtual machines. The failover
clusters host the databases used by Appl. The components of
App1 are in a service template and a
distributed application design.
Several other applications are installed on dedicated
application servers. The application servers are
deployed as virtual machines.
Problem Statements
Litware identifies the following issues:
-The primary service of App1, named App1Service, hangs
frequently and logs events in the application log on the server
where App1Service fails.
-A recent security audit discovers that servers are vulnerable
to attack due to misconfigurations of the operating system.
Requirements
Planned Changes
Litware plans to implement the following changes:
-Replace the third-party network monitoring solution by using a
System Center 2012 solution. The System Center 2012 solution
must monitor all of the devices monitored by the third-party
solution and must discover new devices.
-On all of the virtual machines that have App1 installed,
update App1 to a new version. Technical Requirements
Litware identifies the following technical requirements:
Application administrators
must be able to back up and restore their respective

application servers. Each server must be backed up at a different time.
-All virtual machines must be deployed by using virtual machine templates. The templates must be prepared by using Sysprep.
-All resolved Service Manager incidents must close automatically after 72 hours.
Availability Requirements
Litware identifies the following availability requirements:
-Each request by a support technician to place a server in maintenance mode must be approved by a network administrator.
-App1 must have 99.99 percent availability.
