Have you imagined that you can use a kind of [Latest H12-721\\_V3.0 Test Format](#) study method which can support offline condition besides of supporting online condition?

#### **NEW QUESTION: 1**

A user has scheduled the maintenance window of an RDS DB on Monday at 3 AM. Which of the below mentioned events may force to take the DB instance offline during the maintenance window?

- A. Enabling Read Replica
- B. Security patching
- C. DB password change
- D. Backing up the database

**Answer: B**

Explanation:

Amazon RDS performs maintenance on the DB instance during a user-definable maintenance window.

The system may be offline or experience lower performance during that window. The only maintenance events that may require RDS to make the DB instance offline are:

Scaling compute operations

Software patching. Required software patching is automatically scheduled only for patches that are security and durability related. Such patching occurs

infrequently (typically once every few months) and seldom requires more than a fraction of the maintenance window.
