Answer: A

NEW QUESTION: 2

A backup administrator is configuring an EMC NetWorker embedded storage node within an EMC Disk Library. To ensure that the embedded storage node is used to read the data during clone operations, what is required?

- A. Create a client for the embedded storage node.
- B. Create a clone pool and assign the appropriate rights to it.
- C. Set the clone storage node value for the embedded storage node client resource to itself.
- D. Add the Disk Library engine's hostname to the "Read hostname" field in the device properties.

Answer: D

NEW QUESTION: 3

You have a server that runs Windows Server 2016.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer:

Explanation:

Explanation

Box 1: No

The LastWriteTime of DC01.vhd was on June 21, 2016, and the current date is also June 21, 2016, but the MinimumFileAgeDays is 3.

MinimumFileAgeDays specifies a number of days. The deduplication engine optimizes files that users have not accessed in the number of days that you specify. If the last access time is not available, then the deduplication engine uses the last modified time.

Box 2: No

The size of Readme.txt, 12400bytes, is less than the Minimum File size, 32768 bytes.

MinimumFileSize specifies the minimum size threshold, in bytes, for files that are optimized. The deduplication engine does not optimize files that do not meet the minimum threshold.

Box 3: Yes

The Software ISO file is both large and old enough for deduplication.

NEW QUESTION: 4

Transactional attributes are inherited across the item class hierarchy and the metadata is date-effective.

Changes in the metadata are reflected immediately at the item level.

Which two statements are true regarding metadata?

- A.** End date is calculated automatically based on the next date effective record.
- B.** Any changes made at the parent item class for this transactional item attribute would get inherited.
- C.** Only start dates for a transactional item attribute are entered by a user.
- D.** Both start date and end date for a transactional item attribute are entered by a user.
- E.** Multiple records with the same date range cannot exist if they belong to different domains.

Answer: A,C
