NEW QUESTION: 1

You are working with Anna on your project to determine and map the probability distributions of risk within the project. You have indicated that you will use the uniform distribution method for a portion of the project. Which part of your project is most likely to have a uniform risk distribution?

- A. Project phases that deal with "cutover" technologies
- B. Early concept stage of design
- C. Project initiating
- D. Late completion stages of a project

Answer: B

NEW QUESTION: 2

Which of the following methods can be used to ensure that the GC does not collect an object that is still in use?

- A. WaitForPendingFinalizers()
- B. WaitForFullGCApproach()
- C. WaitForFullGCComplete()
- D. KeepAlive()

Answer: D

Explanation:

Explanation

The GC.KeepAlive method references the specified object, which makes it ineligible for garbage collection from the start of the current routine to the point where this method is called. The purpose of the KeepAlive method is to ensure the existence of a reference to an object that is at risk of being prematurely reclaimed by the garbage collector.

The KeepAlive method performs no operation and produces no side effects other than extending the lifetime of the object passed in as a parameter.

Reference: GC.KeepAlive Method (Object)

[https://msdn.microsoft.com/en-us/library/system.gc.keepalive\(v=vs.110\).aspx](https://msdn.microsoft.com/en-us/library/system.gc.keepalive(v=vs.110).aspx)

NEW QUESTION: 3

Which of the following statements regarding RSVP path messages on an Alcatel-Lucent SR is true?

- A. The IP header HOP object reflects the upstream router's egress interface address.
- B. The path message's IP header options field sets the router alert option.
- C. The IP header source address is the sender's egress interface address.
- D. The IP header destination address is the next-hop interface address.

Answer: B

NEW QUESTION: 4

Drag and Drop Question

You are developing a microservices solution. You plan to deploy the solution to a multinode Azure Kubernetes Service (AKS) cluster.

You need to deploy a solution that includes the following features:

- reverse proxy capabilities
- configurable traffic routing
- TLS termination with a custom certificate

Which component should you use? To answer, drag the appropriate components to the correct requirements. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Helm

To create the ingress controller, use Helm to install nginx-ingress.

Box 2: kubectl

To find the cluster IP address of a Kubernetes pod, use the kubectl get pod command on your local machine, with the option -o wide .

Box 3: Ingress Controller

An ingress controller is a piece of software that provides reverse proxy, configurable traffic routing, and TLS termination for Kubernetes services. Kubernetes ingress resources are used to configure the ingress rules and routes for individual Kubernetes services.

Incorrect Answers:

Virtual Kubelet: Virtual Kubelet is an open-source Kubernetes kubelet implementation that masquerades as a kubelet. This allows Kubernetes nodes to be backed by Virtual Kubelet providers such as serverless cloud container platforms.

CoreDNS: CoreDNS is a flexible, extensible DNS server that can serve as the Kubernetes cluster DNS. Like Kubernetes, the CoreDNS project is hosted by the CNCF.
