NEW QUESTION: 1

Which statement is true about language support for Blue Coat WebFilter on-box database and Dynamic Categorization technologies?

- A. On-box database may contain categorizations for Web sites in languages that are not recognized by dynamic categorization.
- B. If dynamic categorization algorithm correctly identifies the language of a Web site, then the algorithm can also categorize Web sites in that language based on Bayes analysis of words found.
- C. Both on-box database and dynamic categorization categorize Web sites in all human languages, but the precision of categorization results vary.
- D. On-box database and dynamic categorization support the same list of languages and do not categorize Web sites written in other languages.

Answer: B

NEW QUESTION: 2

The DARPA paper defines various procedural patterns to perform secure system development practices.

Which of the following patterns does it include? Each correct answer represents a complete solution.

Choose three.

- A. Password propagation
- B. Red team the design

- C. Hidden implementation
- D. Document the server configuration
- E. Patch proactively

Answer: B,D,E

Explanation:

Explanation/Reference:

Explanation: The following procedural patterns are defined by the DARPA paper in order to perform secure software development practices: Build the server from the ground up: It includes the following features:

Build the server from the ground up. Identify the default installation of the operating system and applications. Support hardening procedures to remove unnecessary services. Identify a vulnerable service for ongoing risk management. Choose the right stuff: It defines guidelines to select right commercial off-the-shelf (COTS) components and decide whether to use and build custom components. Document the server configuration: It supports the creation of an initial configuration baseline and tracks all modifications made to servers and application configurations.

Patch proactively: It supports in applying patches as soon as they are available rather than waiting until the systems cooperate. Red team the design: It supports an independent security assessment from the perspective of an attacker in the quality assurance or testing stage. An independent security assessment is helpful in addressing a security issue before it occurs. Answer A is incorrect. Hidden implementation pattern is not defined in the DARPA paper. This pattern is applicable to software assurance in general.

Hidden implementation limits the ability of an attacker to distinguish the internal workings of an application.

Answer E is incorrect. Password propagation is not defined in the DARPA paper. This pattern is applicable to aspects of authentication in a Web application. Password propagation provides an alternative by requiring that a user's authentication credentials be verified by the database before providing access to that user's data.

NEW QUESTION: 3

Welche der folgenden Punkte sollte einen IS-Prüfer am meisten beschäftigen?

- A. Benachrichtigung der Polizei über versuchten Einbruch fehlgeschlagen
- B. Keine Benachrichtigung der Öffentlichkeit über einen Eingriff
- C. Keine Meldung über einen erfolgreichen Angriff auf das Netzwerk
- D. Keine regelmäßige Überprüfung der Zugriffsrechte

Answer: C

Explanation:

Erläuterung:

Das Nichtmelden eines Eingriffs entspricht einem IS-Prüfer, der einen böswilligen Eingriff versteckt, was ein professioneller Fehler wäre. Obwohl eine Benachrichtigung der Polizei erforderlich sein kann und das Fehlen einer regelmäßigen Überprüfung der Zugriffsrechte möglicherweise ein Problem darstellt, sind sie weniger besorgniserregend als das Versäumnis, den Angriff zu melden. Die Meldung an die Öffentlichkeit ist keine Verpflichtung und hängt vom Wunsch oder Fehlen der Organisation ab, das Eindringen bekannt zu machen.
